

CLONEX ROOTING HORMONE GEL

At its inception in 1989, Clonex Rooting Hormone Gel by Growth Technology represented an unprecedented horticultural innovation as the world's first propagating gel. More than 20 years later, this proudly Australian innovation remains the first propagating gel of choice for professional propagators and hobbyists the world over.

CLONEX directions for use

Dip cuttings to desired rooting depth, then place in propagation medium. Rinse containers before disposal. Please recycle container appropriately. Store in a cool place away from direct sunlight.

Approximately 5000 cuttings per litre.
(Dependent on stem diameter and how far stem is dipped)

Not for use on crops intended for consumption by humans or animals. Ornamental use only.

Manufactured in Australia under pharmaceutical laboratory conditions, Clonex Rooting Hormone Gel contains a unique blend of hormones, anti fungal agents, vitamins and minerals in a highly tenacious and stabilized gel base. Available in 3 different colour coded strengths, there is a Clonex gel for even the most resistant cutting.

CLONEX GREEN

- Formulated for **SOFTWOOD CUTTINGS**
- Active constituent: Indole Butyric Acid 1.5g/L
- A thick gel which has been designed to stay in contact with and around the stem, sealing the cut tissue and supplying hormones and vitamins needed to promote root cell development and promote new root tissue.
- Clonex has a full spectrum of primary nutrients and trace elements to nourish the young roots plus anti-microbial agents to protect against fungal contamination.

Available in 5L and 1L bottles.
